Cathodic protection construction services

ENERGY & MINING

corrpro[®]
An Aegion™ Company

Corrpro is recognized as an engineering leader in the cathodic protection industry and has approximately 500 technical staff members dedicated to providing corrosion protection solutions for every industrial market. In addition, Corrpro employs some of the industry's most qualified construction personnel to assist you with your turnkey installation needs. Many of our construction crew leaders have over 25 years experience in the corrosion industry and all of our construction staff are operator qualified, safety trained and registered with numerous industry databases such as TWIC.

Construction Equipment

Corrpro's extensive fleet of construction equipment meets our clients' installation needs. All equipment is high quality and maintained to the highest standard. Down-time is not an option for Corrpro or our clients. We own specialized equipment such as rotary and air drilling rigs, directional boring equipment, vacuum excavators, auger rigs, cable ploughs, deep anode backfill pumps, specialized equipment trailers and water main connection equipment.

Corrpro's construction team has the expertise to install galvanic and impressed current cathodic protection systems for pipelines, storage tanks and marine structures saving owners thousands of dollars. Corrpro cathodic protection construction services include:

- Deep anode ground beds
- Conventional ground beds
- Linear anode installations
- Specialized above ground storage tank cathodic protection systems
- Offshore and marine installations
- Vacuum truck installation services
- Directional bore installation services

With 26 offices strategically located throughout North America, Corrpro utilizes both rotary auger and air excavation to successfully complete an average of 650 cathodic protection ground bed installations per year.

Construction Contractor Services

As a specialty contractor, Corrpro has the ability to operate as a general contractor or as a subcontractor to the general contractor depending on the project opportunity. Services may include some or all of the following:

- Contractor training in the installation of corrosion protection materials and equipment
- Installation of electrical continuity bonding, sacrificial anodes, isolating fittings and other equipment to assure conformance with project specifications
- Impressed current corrosion monitoring
- System commissioning and preparation of O & M procedures

Corrpro provides products and services for pipeline projects, production wells, collection lines, water purification facilities, pump stations and storage tanks, wastewater force mains, lift stations and wastewater treatment plants.

No matter if you are located onshore or offshore, a Corrpro installation near by is helping to protect our client's infrastructure and the environment.
